Includes a Magnet	Yes	Yes	Yes	Yes	No	No	No	No
Nitrogen filled	No	Yes	No	No	No	No	No	No

Same specs and price for our Side View infinitely adjustable camera as the VWCAM4

## What does TVL Resolution mean for you?

Surveillance video resolution is measured in terms of broadcast TV lines (TVL), as viewed on a monitor screen. Video quality is now being charted with converging lines of higher and higher density. So basically, the TVL resolution number for your camera is the line density where the camera is no longer able to reproduce individual lines. In short, the higher this number is the better the picture. Can you tell the difference? Absolutely, contact a dealer near you to see a demonstration.

## What does the IP Weatherproof rating mean for you?

An IP Rating or code is based on the International Electrotechnical Commission's (IEC), and is essentially a classification process rating the degree of protection offered from the security camera from any intrusion by solid and/or liquid matter. All of our cameras are submersion tested and a minimum IP rating of 68 which ensures our cameras are protected from total dust ingress and protected from long term immersion up to a specified pressure. Our IP 69 rated cameras are tested and can withstand a pressure washer.
